

\$5,000 Grant from Rapid AI

The awardee will receive \$5K in funding, along with a bilateral data use agreement to access the Rapid ANR platform and process up to 125 aneurysm cases that are being tracked (multiple CTA or MRA images per patient will be processed). The Rapid platform provides comprehensive analysis of intracranial aneurysms, including surface area and volume measurements, as well as co-registration and comparison of aneurysms being tracked over time. In addition, RapidAI will provide an independent statistician to assist in data analysis, as well as support for the ensuing publication(s) and presentations at major conferences.
